

# Intelligent, Efficient, and Scalable Security for the Energy and Utilities Sector

HiveWatch

The **HiveWatch® GSOC Operating System** enables security teams in the energy and utilities sectors to increase workplace safety and security, streamline operations and response, and comply with sector regulations.

## Product Highlights

- **Minimize security risks to critical sites:** Data-driven insights into incidents, response times, and more offer security leaders the ability to shift resources as needed
- **Detect and triage threats efficiently:** Quickly detect and respond to tailgating in critical areas to proactively address potential threats while reducing false alarms to ensure resources are available when real incidents occur
- **Emergency Services Communications:** Dispatch local emergency services directly from the GSOC
- **Real-time communication with field resources:** Communicate directly with guard and field resources through the Guard Mobile App, which provides real-time updates, associated video, and information about an event
- **Security operations management:** Easily train GSOC operators with an intuitive platform and embedded standard operating procedures to guide response
- **Better oversight:** Enhance protection with device health monitoring to ensure critical incidents aren't missed because of faulty hardware

## Solve for Common Energy and Utilities Security Challenges

Remote, geographically dispersed locales

Ongoing communication with field resources

Legacy security technology

Property theft and vandalism

Compliance and regulatory requirements
