

Embedded Standard Operating Procedures (SOPs)

Embedded SOPs is a feature in the HiveWatch® GSOC Operating System that allows operators to access customized SOPs in a centralized, easily accessible location within the platform.

Features and Benefits

- Improve efficiency and response times while accessing the SOPs within the same platform used to manage security incidents.
- Limit context switching between multiple systems during a security incident.
- Increase training effectiveness by streamlining next steps within the HiveWatch® GSOC OS for operators to follow.
- Easily close out events and follow up with relevant departments using SOPs to ensure incident resolution.

- Upload your organization's SOPs directly into the platform, creating a central repository for your security documentation.
- SOPs are connected to specific event types, which allows operators to reference relevant SOPs while responding to an incident without leaving the platform.
